

Specifications:

**Nitrogen : 46% min by wt**  
**Moisture : 1% max by wt**  
**Bi-uret : 1% max by wt**

**Size: 1 mm to 2.8mm. 90% min**  
**below 1 mm 5% max.**  
**above 2.8 mm 5% max.**

Urea is a chemical fertilizer produced in white round prill form containing 46% nitrogen. It is 100% water soluble and is suitable for any type of soil or crop. It can be applied through sowing, broadcasting or spraying. Urea should be applied to different crops in two to three split doses.

Urea is packed in 50 kg white coloured bag.

Percentage of bi-uret in Urea is very less hence it can be sprayed on the crops.
