FIRE-FIGHTING MEASURES

Flash Point: 103⁰C (217.4 deg F)

Flammability: Non Flammable material

Extinguishing media:

- *Appropriate extinguishing media:* Dry chemical powder, carbon dioxide, and alcohol resistant foam. Water spray may be effective. Water can be effective in cooling down the fire-exposed containers and knocking down the vapours. Water jets may be used to flush spills away and dilute the same to non-flammable mixtures fog or alcohol-resistant foam by directing streams to the periphery of the fires to prevent spread.

Special Protective Equipment and Precautions for Fire Fighter:

- This material is extremely hazardous to health, but fire fighters may enter areas with extreme care. Full protective clothing including a self-contained breathing apparatus, coat, pants, gloves, boots and bands around legs, arms and waist should be provided. No skin surface should be exposed.
- Evacuate the area and fight fires from a safe distance.
- If tank, rail car or tank truck is involved in a fire, ISOLATE for 800 meters (1/2 mile) in all directions; also, consider initial evacuation for 800 meters (1/2 mile) in all directions or as per locally valid procedures.
- Fire fighters must wear Self Contained Breathing Apparatus (SCBA) and full protective clothing. The chemical is harmful in contact with skin.
- Report any run-off of fire waters contaminated with this chemical as per local and federal procedures applicable.

Unusual fire and explosion hazard:

- Toxic vapors may be released on thermal decomposition including nitrogen oxides, carbon monoxide and cyanide.
- High vapor concentration may result in an explosion hazard.
- Vapors are heavier than air. May travel considerable distance from source and flashback.

SECTION 6 :

ECOLOGICAL INFORMATION

Toxicity

Ecotoxicity:

- Fish ChV = 0.38 mg/l (Estimated).
It is expected to be chronically toxic to fish and other aquatic organisms.

Persistence and degradability:

- It is not expected to be readily biodegradable in aerobic and anaerobic conditions.
- It has estimated that 2-Pyridinamine, 6-methyl- is expected to be found predominantly in soil and its persistence estimate is based on its transformation in this medium. Its half-life in soil, 75 days, exceeds the EPA criteria of ≥ 2 months (and ≤ 6 months). Therefore, 2-Pyridinamine, 6-methyl- is estimated to be persistent in the environment.

Bio accumulative potential:

- BCF = 2.4(Estimated)
- Log Kow = 1.08(Estimated)

Based on the Log Kow and Bio concentration factor value it is expected to have low potential to concentrate in fatty tissue of fish and aquatic organisms.

Mobility in soil (Predicted):

- Koc=72.53. Very low absorption.
- Henry's Law constant: 2.75E-009 atm-m³/mole. Non- volatile from aqueous bodies.
- Log Kow=1.08. Low potential to bio accumulate.

Other adverse effects.

- **Environment Fate:**

Based on environmental modeling, it is estimated to be persistent in the environment and is expected to be found predominantly in soil. It is also expected to be found in water but not in sediment. It has low potential to bio accumulate and does not biodegrade readily. It is not expected to bio accumulate also. Since this is an estimated result, it is recommended that the material should not be disposed into the environment. The material should never be disposed into the sewage.

SECTION 13: DISPOSAL CONSIDERATIONS
