Water can be effective in cooling down the fire-exposed containers and Knocking down the vapours. Water jets may be used to flush spills away and dilute the same to nonflammable mixtures fog or alcohol-resistant foam by directing streams to the periphery of the fires to prevent spread.

**Special Protective Equipment and Precautions for Fire Fighter:**

- Evacuate the area and fight fires from a safe distance.
- If tank, rail car or tank truck is involved in a fire, ISOLATE for 800 meters (1/2 mile) in all directions; also, consider initial evacuation for 800 meters (1/2 mile) in all directions or as per locally valid procedures.
- Fire fighters must wear Self Contained Breathing Apparatus (SCBA) and full protective clothing. The chemical is harmful in contact with skin.
- Report any run-off of fire waters contaminated with this chemical as per local and federal procedures applicable.

**Unusual fire and explosion hazard:**

- Toxic vapors may be released on thermal decomposition including nitrogen oxides, hydrogen chloride, carbon monoxide, Carbon di-oxide and cyanide.
- High vapor concentration may result in an explosion hazard.
- Vapors are heavier than air. May travel considerable distance from source and flashback.

## SECTION 12: ECOLOGICAL INFORMATION

### Toxicity :

#### Ecotoxicity (Estimated)

- Fish ChV=120,000 mg/l
- Isonipectic acid is not chronically toxic to fish. It is important to note that these results do not suggest that Isonipectic acid will not be toxic to all aquatic organisms. Some aquatic organisms, such as daphnids, may be more sensitive to both acute and chronic exposures to Isonipectic acid.

#### Persistence and degradability

- It is expected to be biodegradable in aerobic and anaerobic conditions. Isonipectic acid is expected to be found predominantly in soil and its persistence estimate is based on its transformation in this medium. Its half-life in soil, 17 days, does not exceed the EPA criteria. Therefore, Isonipectic acid is estimated not to be persistent in the environment

#### Bio accumulative potential

- BCF = 3.2
- Log Kow = -3.05

Based on the Log Kow and Bio concentration factor value it is expected to have negligible potential to concentrate in fatty tissue of fish and aquatic organisms relative to its surroundings. Isonipectic acid is not expected to bio accumulate in the food chain because it does not exceed the BCF criteria

#### Mobility in soil

- Log Koc= 0.913 (estimated). Moderate sorption.
- Henry's Law Constant 6.43E-012 atm-m<sup>3</sup>/mole at 25 degrees. It is non-volatile from aqueous bodies.
- Log Kow= -3.05 (estimated). Negligible potential to bio accumulate.

#### Other adverse effects.

- **Environment Fate:**

Based on the environmental modeling, this material has a moderate potential to get absorbed in the organic matter of soil and is non-volatile from water bodies. Since this is an estimated result it is recommended that the material should be disposed into the environment. The material should never be disposed into the sewage.
